

# Testimonial: Oakham Pest Control Ltd

## Testimonial from Shaun Muller, Oakham Pest Control Ltd

At Oakham Pest Control Ltd, we've had the opportunity to use BugScents on several bed bug treatments, and the results have been exceptional. The device has significantly streamlined our pest control process, making treatments more efficient and less stressful for both our team and our clients.

One of the most notable aspects of BugScents is how impressed our clients have been with its performance. In fact, several clients were so pleased with the results that they requested and purchased additional BugScents for other rooms in their properties. This level of customer satisfaction speaks volumes about the product's effectiveness and reliability.

What truly sets BugScents apart from other monitoring devices is its dual functionality. Unlike generic bed bug monitors that only detect infestations, BugScents also plays an active role in the treatment process. **This unique combination of detection and control makes it an invaluable tool in our pest management arsenal.**

As professionals in the pest control industry, we're always on the lookout for innovative solutions that enhance our service offerings. BugScents has proven to be a game-changer, enabling us to deliver superior results while building trust and satisfaction with our clients. **We fully recommend BugScents to anyone looking for an advanced, effective, and reliable solution for bed bug detection and treatment.**

New to the professional market, BugScents™ Sentry Pro is our slim, discreet and re-usable detector, powered by our patented and highly effective lure technology, that detects bed bugs fast for active monitoring.

We are changing the bed bug control landscape by arming pest controllers with the fastest way to confirm detection and monitor bed bugs.
